

Bay Systems Adds AutoCAD 2010 to Design and Engineering Software Portfolio

Belleville, Ontario, September 30, 2009 – Bay Systems today announced it has become an Autodesk authorized value-added reseller of [AutoCAD 2010](#) software.

AutoCAD is the world's leading design and documentation platform. The 2010 release provides more power and innovation to help customers document, communicate, explore and customize design ideas. With new free-form design tools, users can easily explore ideas in 3D models to create almost any shape they can imagine. New PDF import and underlay and enhanced publishing features can improve two-way communication with the extended design team. In addition, the introduction of constraint-based parametric drawing tools enables users to define persistent relationships between objects, accelerating crucial design revision workflows. AutoCAD 2010 now also supports 3D printing, which makes it easy to produce physical 3D models and physical prototypes by connecting to on-demand 3D printing services or personal 3D printers.

"Providing customers with the powerful 3D design tools that enable them to stretch the limits of their creativity was our priority for the 2010 release of AutoCAD," said Guri Stark, Autodesk vice president, AutoCAD and Platform Products. "With the support of Bay Systems, we look forward to helping even more design professionals use AutoCAD to take their documentation and design further."

"Providing powerful 2D and 3D software within the reach of mainstream designers and manufacturers and companies of all sizes allows the exploring of ideas in any shape imaginable. Effective design requires being able to quickly and easily explore your ideas. AutoCAD software provides the 2D and 3D capabilities to shape, expand, and visualize your ideas unlike ever before. Customers can achieve greater collaboration between industrial design, engineering, manufacturing and marketing teams that are all responsible for bringing quality products to market."

Bay Systems is based in the Quinte area within Ontario. We are a small company that focuses on providing a personal touch service to its surrounding area small to medium sized customers. Customers range from the Engineering Consultants, Healthcare, Manufacturing and Department of National Defense. Bay Systems is diversified so that it can provide a complete turn-key operation for any customer's needs. We provide consulting services such as project management, detailed project planning, hardware and software sales and implementation, as well as complete IT services.

Autodesk carefully selects resellers to help ensure a strong partner network capable of superior, responsive service. Today, there are more than 1700 resellers serving more than 9 million Autodesk users worldwide with exemplary proficiency in the demonstration, installation and support of Autodesk

products. Authorized Autodesk Resellers gain a dependable partner in Autodesk, receiving incentives, marketing support, training for sales and technical representatives, and business planning and management guidance.
